For example, if the distribution of the rason for nickel (DNI) is 10 and the distribution of the motif of silver distribution (DAG) is 100, the separation factor Silver / Nau (SFAG / NI) is equal to DAG / DNI = SFAG / NI = 10. In some cases, a chemical reaction can be used to improve transfer, for example, use Of an aqueous chatical solution (as a hydroxide solution), to extract phenols from a flow of hydrocarbons. To solve this problem, it is convenient to add a few milliliters of brine and shake again. It opens from time to time the volar of the funnel so that the gases that can be formed from the funnel. This process is also known as liquid extract or extract of solvents; However, this last term can be borrowed with confusion, because it also applies to the leaching of a solid substance contained in a solid. Application The process has an industrial repercussion and is used in the extraction of oils, fats and pigments. The liquid-liquid leaching process separates two miscible or polar substances (iodine + water) between SA by means of a third substance, for example, carbon tetrachloride, which is miscible with the substance to be extracted (iodine), but it is not miscible with substantial separation (water). With relative frequency, emulsions or interfaces that prevent correct separation into the decanter funnel of the solvent layers, almost always aqueous and organic. The equation on the liquid extraction is extracted from the chest of a liquid to a substance (solute) contacting another Liquid L, immiscible or partially miscd with A, which has greater affinity by the solute, passing Breast substance to Bosa of B. As expected, the extraction is never total, but more efficiency is obtained saicnĀtsbus sasson sad edadilbulos a ondalortnoc odasu res edop mĀm at ossecorp etsE .ecafretni amu ed sĀvarta otatnoc me oĀtse euq e edadilbulos ed suarg setnerefid moc . jolite ed lareberc ralucsav etnedica uo ,oimrĀforolc e augĀ ,olpmexe rop( sievĀcsim etnemlaicrap uo sievĀcsimi setnevlos siod me adivlossid res edop euq aicnĀtsbus amu ed oĀĀĀarapes a arap odasu ocimĀuq ossecorp mu Ā ,setnevlos ed oĀĀĀartxe uo setnevlos ed oĀĀĀartxe omoc adicehnoc mĀm at ,adiuqĀ-adiuqĀl oĀĀĀartxe a ,acimĀuq aN .siod so ertne aralc ecafretni amu arap opmet mu ratneserper oditimprep Ā .linuf od ortned odivomer res a odanitsed etnevlos on adivlossid aicnĀtsbus a :etnuges o Ā otnemidecorp O ,etnerefretni uo axelpmoc zirtam amu ed ol-Ārapes uo otllana mu rartnecnoc arucorp ,oĀĀĀarepo atse moC .sesaf saud sa odnarapes e arutsim a odnatiga ,odnuges o odnanocida ,oremirp od odĀartxe res edop ,roiretna o moc levĀcsim oĀĀn etnevlos odnuges mu me levĀĀlos siam sam ,etnevlos me levĀĀlos aicnĀtsbus amU otnemidecorp .JofĀĀĀaugibmasedi oĀĀĀartxe a ajev ,sodacifingis sortuo roP .odiugĀl-adiuqĀl oĀĀĀartxe erbos sepĀĀāmrofnĀ sartuo e sepĀĀĀnifed met oirĀnoickiW O somretze skniL .etnatsnoc ĀĀ ,arutarepmet adanimreted amu a ,setnevlos sod mu adac me aicnĀtsbus adirefer ad sepĀĀĀartnecnoc sad ovitaler O .odatipecorp mu omoc .odaugeda etnepicer mu me odanerĀ Ā osned siam odiuqĀl o e otreĀa ĀĀ linuf od roiretni epsuc O .meganced ed linuf mu me odivlossid ĀĀ ossecorp o ,oirĀarobal ed levĀĀn oN .oĀĀĀartxe ed etnevlos o arap "soxelpmoc serodamrof" setnega ed oĀĀĀĀida a uo oĀĀĀĀatnemila ed arutsim a arap adnev ed setnega ed oĀĀĀĀida alep adarohlem res edop )otulos odivlossid etnenopmoc od aicnĀĀreĀsĀrt A .atief ĀĀ oĀĀĀĀartxe acinĀĀ amu e zev ĀĀ amu ed odanocida ĀĀ odnaug ,euq sepĀĀĀartxe e sepĀĀĀarf sairĀv me adidivid ĀĀ etnevlos odnuges od edaditnaug A other solvents. A more complicated concept of extraciĀĀ n Alkido-Alkido AĀ used in a process to completely separate two solutes. 3 separation ĀĀ, one of the phases, is to calculate the concentration ĀĀ n of iodine in each phase, value, equivalent to thiosulfate. This constant is designated as a partition coefficient and may be expressed as: 
$$K = \frac{[Substance]_1}{[Substance]_2}$$
 where [Substance] 2} The concentration ĀĀ of the substance to be extracted, in the first solvent and, logically, [Substance]2 is concentrated. ĀĀ of the same substance in the other solvent. ĀĀ "Extracciayan ĀĀ nĀ" redirects here. A primary solvent of the extraciĀĀ is used to extract one of the solutes present in a mixture (similar to the depletion in the distillationMaybe ĀĀ n) and a washing solvent is used to clean the free extract of the second solute (similar to rectification<sup>3</sup> in the distillation It shall supplemented with the solvent from which Ni is extracted and the solubility of the substance is greatest. Especially in sunAbstract.....

and we do not separate 3 completely from our solvents. In most cases, the separation of the ĀĀ phases occurs smoothly. Factors separationpesĀĀ n The separating factorĀĀ n is not a ĀĀ r of distributionĀĀ n divided by another. It is a measure of the system's ability to separate into two solutes.
